

EEDC is a permanent platform for European engineering deans bringing together their collective strengths for the advancement of engineering education and research.

The European Society for Engineering Education SEFI provides a forum for exchange of information about experiences, challenges and best practices in engineering education leadership, European Engineering Deans Council - EEDC, since 2011. This forum helps engineering deans find opportunities for collaboration with industry and with other stakeholders in education, research and innovation. It also encourages deans to play a leading role in developing European and national policies for the benefit of the society.

Annual European Convention for Engineering Deans 2018 in Trondheim

Definition of a Dean

"A person who leads or has led an engineering college, school, faculty or equivalent, or who has been in a similar suitable leadership role at a University in Europe; at a European institution of higher education that is primarily focused on engineering education; or at an engineering deans council or organisation in a European country or region"

Membership

EEDC is open to all deans from higher engineering education institutions in Europe. Participation is free for the deans from the SEFI institutional members. For further information and subscriptions you may get in touch with SEFI office.

Activities

- Exchange of best practices among EEDC members
- Organisation of annual **European Convention for Engineering Deans**
- Collection and analysis of information about higher education in Europe and sharing it with EEDC members
- Participation in political discussions related to engineering education and research
- Cooperation with other deans' organisations at local, national and international level
