8TH INTERNATIONAL RESEARCH SYMPOSIUM ON PBL

EDUCATE FOR
THE FUTURE:
**PBL, SUSTAINABILITY
AND DIGITALISATION**

AALBORG UNIVERSITY, AALBORG, DENMARK
AUGUST 16-18 2020

United Nations developed the 17 Sustainable Development Goals (SDGs) which constitute a framework for sustainable development actions towards 2030. Engineering plays a crucial role in addressing the SDGs and engineering and science students need to learn how to analyse and solve complex sustainable problems. Therefore, the competences of interdisciplinarity, systems thinking, collaboration and complex problem solving are needed for educating for the future. Educating for sustainability requires innovative, student-centred, problem-oriented learning approaches such as PBL – problem-based and project-based learning. When PBL is intertwined with digitalisation, it furthermore unfolds into new ways of organising learning and engineering practice. The combination of PBL and digitalisation hold new and yet unforeseen potentials to address the complexity, flexibility and international collaboration needed in the strive for the sustainable development goals.
